

**Regional Priorities from the Integrated Community Sustainability Plans
Corner Brook – Rocky Harbour Region:
Summary of Findings**

**Prepared for Rural Secretariat: Corner Brook-Rocky Harbour Region
by Candice Pike
April 2011**

INTRODUCTION

Municipalities across Newfoundland and Labrador were required to submit an Integrated Community Sustainability Plan (ICSP) to the government by March 2010 as a requirement of the Gas Tax Agreement. This is an agreement between local and provincial governments that provides funding for municipal projects (with a particular focus on infrastructure projects that benefit the environment). The ability for municipalities to access future rounds of Gas Tax Funding was contingent on the completion of an ICSP. The ICSPs required municipalities to examine their communities in terms of five pillars of sustainability – Environmental, Economic, Social, Cultural and Governance. The information contained in this report is a summary of research findings from a project that compiled and compared data from ICSPs created in the Rural Secretariat region of Corner Brook-Rocky Harbour. It looks at commonly identified assets, issues, goals, and projects, to find commonalities within the region and smaller regional clusters.

In total there were twenty ICSPs created in the Corner Brook-Rocky Harbour region. Of these, fifteen were stand-alone plans with a focus on an individual municipality, two were joint municipal plans/ICSPs, and three were joint plans with neighbouring municipalities. Seven plans were prepared by the municipalities themselves and thirteen by consultants. The list of communities, their plans, and the writers of the plans can be found in Appendix A.

The information contained in this report provides a preliminary snapshot and overview of some specific elements which communities perceived to be important to share with government at this point in time. It illustrates some broad, regional trends while also providing examples of the particular projects municipalities are planning. However, it is useful to note that the information contained in this report is the result of a short-term research project and an inconsistent/non-uniform set of data. Because of this, numbers and percentages should not be taken as “hard” facts but rather as indicators of general trends. Achieving a broad perspective such as this allows researchers and other interested parties to focus future research and attention on the priorities that have been identified here.

METHODS

Each community's ICSP varied dramatically in length, quality and format and in addition to these considerations, there was no pre-existing system of cataloguing ICSP data that would allow researchers to look at the complex relationships within each plan and between a number of plans. Therefore, the first necessary task was to find an effective way to organize the data contained in these plans. Such a method needed to be easily searchable and able to show complex relationships between sets of information. Ideally a formal database that could be updated year-to-year would be constructed to do this but given the complexity of the data, the time constraints of the research project, and the desire to act quickly given the timely nature of the ICSP highlighted projects, an intermediary solution was determined. This solution involved using a pre-existing blog/wiki structure within which data could be easily categorized according to geographic location and also coded (tagged) with searchable terms. This eliminated the need to write a unique computer program to do this work, as would be necessary with such a multi-layered database. The searchable terms were determined to clearly identify the goals, projects, issues, assets, and potential partners in each ICSP

In this unique data management tool, most pieces of data were given their own entry and coded according to the communities and sub-region they came from. They were also given a tag that described the asset, issue, goal, project, partners and, often, which pillar of sustainability it was related to. Similar entries were often combined for more succinct searching. Statements that were too vague to be coded were not included, for example, goal statements like “make the town a better place to live.”

Additionally, because the ICSPs were created for a specific reason (to access Gas Tax Funding), and with specific requirements from the government, in some plans there tends to be a bias surrounding the types of projects that are featured. As a result of this, and due to the variation in the level of detail in the plans themselves, some communities had as low as twenty-three unique entries (a combination of assets, issues, goals, and projects) and others as many as ninety. With this being noted, the numbers that are documented in this report are not exact and instead are included to provide an overview of the situation and frame the highlighted projects in a more meaningful way.

The researcher and author of this report has deliberately made very few of their own inferences and only included assets, issues, goals, and projects that were prominent and specifically addressed in the ICSPs. Whenever possible, the information was entered to the data management tool/wiki verbatim as it appeared in the plans. However, choices as to the category names and which projects and goals fit into each were made at the discretion of the researcher.

ASSETS

Each ICSP began with an introduction to the community that located it both geographically, demographically, and socially. Within these community descriptions points of pride were often highlighted and, while what is included in this report is by no means an exhaustive list, examples of assets were included for each community and a list of the chosen asset categories appears in Appendix B. Surprisingly, while most community goals and projects were focused on infrastructure and economically driven issues, many communities took an opportunity to focus on assets that were centred around the social and cultural pillars of sustainability. The most common asset listed was *Heritage Structures*. Examples of these include the Nurse Bennett Heritage House and Barn Replica in Daniel's Harbour and the award winning architectural reconstructions in Woody Point and Trout River. However, most often, communities mention their historical assets in broader terms by recognising the older residential and commercial areas of towns, such as Corner Brook's Townsite and Broadway areas.

Almost every community in Newfoundland and Labrador could easily list their *green spaces and viewscapes* as assets. Therefore it is not surprising that most ICSPs addressed this in some way, and eight communities formally recognised their view as an asset. These communities include Woody Point and Trout River who comment on their ocean views and Corner Brook's comment about having pride in a "dramatic topography." Often these assets are framed as useful for attracting tourists and improving the quality of life for residents.

Quality of life for residents also increases when there is a high degree of *Community Pride*. Communities including Cormack, Glenburnie-Birchy Head-Shoal Brook, Cow Head, York Harbour, Pasadena, Trout River, and Jackson's Arm all noted having a strong sense of community pride. This pride has benefited these communities by encouraging active involvement by citizens leading to a higher quality of life. This particular asset was often identified as a key opportunity for communities trying to market themselves to attract more young families.

Some other significant, though less documented community-identified assets include having *Local Craftspeople and Those with Traditional Skills* (Glenburnie-Birchy Head-Shoal Brook, Woody Point, Trout River, Cow Head, and Jackson's Arm), having a *High Employment Rate* (Massey Drive and Steady Brook) and infrastructure assets such as a *Library* (Cow Head and Steady Brook) and a *Museum* (Cow Head, Trout River, Steady Brook). While few communities focused on highlighting specific assets in their ICSPs, looking at some of the most commonly mentioned ones does indicate an example of assets that the area may be interested in capitalising on. It also provides a framework through which to view the inspiration for certain goals and projects. These assets also indicate what positive points are valued by communities which may in turn act as inspiration for projects and goals of neighbouring communities or regional counterparts.

ISSUES

Within the ICSPs, municipalities also highlighted challenges or issues which were required to be addressed within their community. These issues were categorised by the author to create a list of common issues within the region, a complete list of which can be viewed in Appendix B. As with the assets descriptions, those issues that were too vague, were omitted from the data. For example, listing “museum” under issues did not indicate if the community needs to build a museum, make improvements to an existing museum, or do research/heritage work in their area and therefore was not included.

On review of the data eight key issues arose that recurred throughout the plans. They include:

- *Engaging Community and Lack of Community Involvement* This includes an unfilled need for volunteers, a lack of community members attending festivals and town hall meetings, and a lack of interest in council/municipal affairs
- *Developing Plans and Planning* Many communities would like to create a municipal plan as well as smaller, more focused plans which would provide guidelines for environmental, economic, and social/cultural development. Author note – Municipal planning was a key piece of work which could be funding through the Gas Tax, therefore, this may explain its significance in many of the ICSPs.
- *Landscaping and Community Beautification* There is a need to remove eyesores, to plant flowers, to organise formal clean-up days, and to improve the appearance of derelict buildings
- *Recreation Infrastructure and Programs* This is a lack of appropriate playgrounds, community halls, activities for youth and seniors, and other such structures and programming for active living
- *Tourism Development* Municipalities commented on the lack of projects to attract tourists to the area, as well as the need to create tourism as a year-round industry.
- *Water System* This related to issues of water conservation, infrastructure upgrades, and water system safety.
- *Decreasing / Aging Population* This was identified as a challenge for municipalities and is attributed to out-migration and smaller family sizes.
- *Communication* This relates to a lack of effective communication between councils, their citizens and community groups.

Often these issues formed the basis for the goals that communities identified (see proceeding section); however, sometimes they were left as isolated comments (perhaps indicating difficulty with translating these into actions). These issues may be just as important as those which municipalities were able to develop into goals and actions, and may be an indicator of areas (particularly social and cultural) which communities will need help with in the future.

GOALS

In cataloguing the ICSPs for this region the author noted sixty-two different community identified goals. They fell under the sustainability categories of Cultural, Economic, Environmental, Social and Governance goals. A complete list of the types of goals identified can be found in Appendix B; but, the most frequently mentioned goals are elaborated on below. Interestingly governance and social goals were not as prominently featured as the economic, cultural and environmental goals but this may have had more to do with understanding the distinction between categories than the actual priorities of communities.

Cultural Goals

The most commonly identified goals in this category were centred around *Historic Preservation and Promotion*. Fifteen communities identified approximately twenty-one different goals within this category. These goals involved a range of focus areas including discovering, documenting, and archiving community histories, and preserving heritage structures, traditional skills, and the stories of seniors. They also included broader goals – for example, in St. Paul's the ICSP noted that it was important to move towards celebrating their heritage. It is not surprising, but interesting to note that these goals are also often pragmatic and related to finding a way to use a rich cultural history to enhance the local tourism industry.

Economic Goals

While, preserving and promoting heritage may be perceived as an economic goal, other more explicit economic goals were also highlighted in the ICSPs. The most commonly mentioned economic goal was to *Encourage Business Development*. Approximately twenty-seven goals were identified by nineteen communities in this category. The type of development alluded to included supporting local business, encouraging new businesses to start up, preserving and creating laws and guidelines that facilitate new business start ups and the development of land for a variety of production and retailing purposes. Cow Head and the St. Paul's/ Parsons Pond/Daniel's Harbour area also mentioned that it was important for this economic development to be community led; where the community would start projects in response to its own needs.

Second to business development, *Encouraging Tourism* was also a frequently mentioned economic goal. Sixteen communities identified approximately twenty-one goals related to tourism. Many communities are relying more and more on tourism as an economic driver and unsurprisingly some of the goals are centred around developing and promoting municipalities and sub-regions as year-round tourist destinations.

Environmental Goals

Environmental goals were a significant feature of most ICSPs and more goals fell under the Environmental pillar than under any of the other four pillars. As a result of the diverse nature of the region many of the goals were focused on the unique geography or cultural needs of the location. For example Cow Head was concerned with mitigating coastal erosion, Corner Brook was concerned with greening their *industrial* development while communities in the Park seemed more concerned with *public* education on environmental issues.

One common environmental goal throughout the plans was to *Protect Natural Environments*. The environments to protect include oceans, trees, lakes, air quality, and wildlife habitats depending on the particular concern and geography of the area. At least sixteen communities thought that this was an important goal both for ecological sustainability as well as economic sustainability (related to protecting these natural areas for tourism related endeavours).

Governance Goals

In terms of governance goals, having an *Open and Accessible Government* and increasing *Citizen Input* in municipal matters appear to be common ideals. With changing economic circumstances, budgetary concerns also guide some of the key goals for these communities. Creating and following a balanced budget or otherwise *Working within their Financial Resources* was a key goal expressed by thirteen communities.

Social Goals

Health of residents is also on the radar of many communities as they noted that ideally their community wishes to support *Active Living* and have a *High Quality of Life*. Related to active living many communities are striving to *Develop Recreation Infrastructure and Programming*. With regard to enhancing quality of life, several communities see it as a goal to both *Encourage Community Engagement* (in terms of getting community members interested in municipal happenings and participating in local events) and *Develop Community Pride* as exemplified in Cow Head and Jackson's Arm who wished to "Build community spirit and involvement."

For the most part, these goals address the issues put forth by the municipalities, but their development into projects is where the real action and change can take place.

PROJECTS

The most detailed aspects of the ICSPs were the projects, and they were usually, although not always, listed in relation to specific goals. These projects highlighted the action steps that municipalities are taking or would like to take in order to achieve the goals that they have set for themselves. Each community outlined multiple projects with varying degrees of detail. Some were vague such as "improve town hall" while others provided details including the cost, potential partners, start dates, phases, and end dates. This made it difficult to develop a coding scheme that was general enough to see patterns but specific enough to identify a particular type of project. As a result this report highlights the trends and clusters of projects, rather than focussing on specific project details. Some of the key projects are listed below and a complete list of projects in each category can be found in Appendix C.

Buildings and Equipment

The most common type of project documented relates to the building of new structures, purchasing of new equipment or making improvements to existing municipal buildings and equipment. Most of these projects required money and support from the provincial government and many were already in a detailed stage of planning or currently in progress. There were approximately thirty-seven projects highlighted related to *Buildings and Equipment* and these projects were distributed throughout the region. Examples include building new town halls, improvements to town halls, new wharves and upgrades to community centres.

Sidewalks and Roadways

Creating and Repairing Sidewalks and Roadways was another common infrastructure project. There were approximately twenty-one projects identified in this category. Projects were distributed throughout the region and involved road paving, road recapping, and the creation of sidewalks.

Water and Sewer

Improvements to water and sewer systems were also common projects. There were approximately thirty-three projects related to water and fifteen related to sewer in this region. The sewer projects seemed more uniform and involved either providing sewer services to areas currently without any or upgrading/creating a treatment facility. Water-related projects were more diverse and included pumping systems, filtration systems, and conservation measures. There were no clear sub-regional clusters of identical projects, as projects related to both water and sewer were spread throughout the entire region.

Waste Management and Reduction

While many of the above mentioned infrastructure projects are now in the delivery phase, some of the environmental projects are in more exploratory phases such as assessment, research, and planning. Some of the most common environmental projects have to do with *Waste Management and Reduction*. Approximately fifteen projects were identified in this category.

Within the National Park sub-region Glenburnie-Birchy Head-Shoal Brook, Woody Point and Trout River all want to engage in “waste management/waste reduction and composting programs.” Other projects include becoming “Part of Provincial Program of Waste Removal” in Humber Arm South and “Include waste diversion and waste reduction initiatives in waste management planning.” in St. Paul's, Parsons Pond, and Daniel's Harbour. Municipalities are also looking for opportunities to reduce material waste and recycle potential waste in Pasadena and The North Shore Bay of Islands.

Landscaping and Community Beautification

Another project that many communities framed as environmental in nature was engaging in *Landscaping and Community Beautification*. These fourteen projects were similar throughout the region. The majority of projects centred around developing community clean-up campaigns or holding community clean-up events. Two unique projects surfaced as well: “Upkeep of old and new cemeteries.” in Cow Head and the more policy-oriented “Develop landscaping guidelines” and “Introduce a private tree preservation bylaw” in Corner Brook.

Public Environmental Education

The final significant environmental project calls for *Public Education* initiatives around environmental issues. Clusters of these projects occurred in the Humber Valley area with Corner Brook, Hampden, and Pasadena planning similar projects and in the Park Area with St. Paul's, Cow Head, and Rocky Harbour planning similar projects that involved both creating campaigns geared towards children in school with others focused more on educating the entire population. There were at least twelve projects in this category. Some communities, including Rocky Harbour, Hampden, The North Shore Bay of Islands, and Mount Moriah saw both initiatives as worthwhile and intended to complete projects such as “Create public awareness campaign” and “Participate in school programs.”

Develop Recreation Programs/Facilities

While developing or upgrading recreation facilities is considered an infrastructural project, there was also a separate category for projects related to *Developing Recreation Programs/Facilities*. There was some overlap with the Buildings and Equipment category when the projects required buildings or structures to be created or fixed. These cross-category projects include upgrading the playground in Hampden and repairing the hockey rink in Trout River. Throughout the region projects in this category more generally included, not only the brick and mortar facilities aspects, but also programming. Communities particularly focused on programming for seniors and youth but often were lacking recreation staff to help mobilise this. For example, see projects under this category listed by Humber Arm South, Corner Brook, Pasadena and St. Paul's, Parson's Pond, Daniel's Harbour. Cow Head addressed recreation from a more comprehensive perspective and is taking a three step approach beginning with assessing the recreation needs, developing and implementing a plan and improving the current infrastructure and programming.

Approximately twenty-one projects were identified within the overall category.

Walking Trails

Another set of projects related to both recreation and tourism is the plan by communities to upgrade or create *Walking Trails*. There were approximately twenty-one such projects spread throughout the region however, some clusters existed with Corner Brook, Deer Lake, Hampden, Pasadena, Massey Drive and Steady Brook developing walking trails in the Humber Valley sub-region, and Norris Point, Woody Point, Rocky Harbour, and Trout River doing the same in the National Park sub-region. Also, in the greater Bay of Islands area, Humber Arm South, Mount Moriah, Cox's Cove, and the North Shore Bay of Islands all identified walking trail related projects.

Most projects were broad in scope and involved such initiatives as “Improving and Expanding Walking Trails” in Rocky Harbour, Hampden, Mount Moriah and the North Shore Bay of Islands and developing walking trails in Humber Arm South, Pasadena, and Jackson's Arm. Other projects were more specific including “Improvements to Tippings Pond Walking Trails” in Massey Drive and “Extension of Canada Trail” in Pasadena. Unlike any of the other municipalities Steady Brook took a more comprehensive approach to developing trails with a project that would “Design and construct improved network of local walking trails linking neighbourhoods, open spaces, conservation areas, recreation facilities, businesses” and “Conduct property research to identify town easements to facilitate future park and trail development.”

Encourage Volunteerism

While most communities in the region noted that volunteers were crucial to their futures, a theme emerged when several communities in the National Park sub-region noted that they were experiencing volunteer burnout from the demands of summer festivals and also having difficulty attracting volunteers. Projects proposed to address this concern centred around recognising and appreciating volunteer efforts such as “Recognize and reward volunteers through a Volunteer Reward Program” in Woody Point and “Volunteer involvement, recruitment and training plan” and “Volunteer appreciation” in Cow Head. There were a cluster of these projects to *Encourage Volunteerism* in the National Park sub-region (Woody Point, Cow Head, Glenburnie-Birchy Head-Shoal Brook, Rocky Harbour and Trout River) and another cluster in the Humber Valley area (including Corner Brook, Cormack, Hampden, and Pasadena). Projects were also identified in Humber Arm South, Mount Moriah, the North Shore Bay of Islands, and Jackson's Arm. This indicates that the need to engage and retain volunteers is a regional issue that is compounded in the Gros Morne Area by a high demand on their time during summer festivals, and difficulty soliciting people who commute to work in larger centres like Corner Brook to get involved in the community they live in.

Housing

Approximately thirteen projects were centred around *Housing*, often focusing on ensuring appropriate housing for an area such as sub-division planning in Humber Arm South and Norris Point and the development of seniors' housing in Mount Moriah. Cow Head identified specific actions needed including contacting the owners of vacant houses, investigating tax breaks, creating new subdivisions. Yet, most projects were more general in nature and were centred around encouraging the development of a “good housing mix”. Housing projects were spread throughout the region and, while many of them were quite similar, they were too vague and geographically dispersed to indicate any sub-regional clusters.

Signage

With increasing tourism as a key economic goal for most communities in the region, a popular tourism-related project was the development of *Signage*. Fifteen projects related to signage were spread throughout the region. These projects usually involved creating “interpretation” boards in key tourism areas such as near walking trails or close to natural and cultural hotspots in the area. Signage projects also involved projects that would create signs to direct people to the location of particular sites such as the development of a “signage and wayfinding strategy” in Corner Brook.

Tourism Promotion and Infrastructure

While signage projects are certainly related to developing the tourism industry, several projects more directly related to tourism also featured prominently in ICSPs across the region. One cluster of projects existed in Woody Point, Trout River and Glenburnie-Birchy Head-Shoal Brook where each community wants to conduct a Tourism Gap Analysis and create a Tourism Management Plan. Throughout the whole region there were approximately eight projects related to *Tourism Promotion* which involved marketing the area or increasing awareness about local events and ten related to *Tourism Infrastructure* such as building viewpoints, information centres and accommodations.

Mount Moriah, Hampden, and the North Shore Bay of Islands are going to “build viewparks and lookouts” and Glenburnie-Birchy Head-Shoal Brook would like “to establish a Community Information Centre or Visitor’s Kiosk” - these are common examples of the infrastructure projects. Other communities such as Deer Lake aim to focus on tourism promotions, for example, to “Develop a Comprehensive Marketing Plan”.

Historic Preservation and Promotion

While goals related to *Historic Preservation and Promotion* were prominent, this did not necessarily translate into projects, as there were only approximately eighteen projects identified within this category. These projects, distributed throughout the region, were often already underway or clearly planned to start in the near future. They were often specific to the area such as “The completion of the Parsons Pond Fishery Heritage Project” in Parsons Pond and “Continued development of the Ford Heritage Property and its programming” in Jackson’s Arm. Other projects were more general in nature such as a “Seniors’ storytelling/oral history project” in Cow Head and “Seniors Heritage Project.” in Steady Brook. Most of the project details involved researching the town’s history and documenting it in writing or in a museum setting.

Governance Projects

Each ICSP also included a variety of Governance related projects. These projects, unsurprisingly, were often very specific according to the needs and organization of the various municipal councils, but there were some regional commonalities.

Council Outreach

There were at least twenty projects related to *Council Outreach*. Seven communities want to publish a town newsletter, others to develop a website, and others to hold Town Hall Meetings. These projects are directly related to the governance-related goals that communities identified and while they encompassed a broad range of activities, they are similar in taking action to create more direct lines of communication between council and community residents.

Creating an Effective Council

Eleven projects were related to *Creating an Effective Council* and involved such initiatives as instituting rules of order for council meetings and having protocols for dealing with specific issues. For example Glenburnie-Birchy Head-Shoal Brook, Lark Harbour and Trout River intend to “Develop and adopt official Town Council procedures.” And Rocky Harbour, Hampden, and the North Shore Bay of Islands want to review their committee structures.

Municipal Planning

Finally, at least seventeen projects were related to *Municipal Planning*. This included communities who intend to develop a municipal plan as well as communities who need more small-scale plans for such areas as land use planning and storm-water management. In addition to these featured projects the need for planning and the intention to plan arose in an overwhelming number of ICSPs. It is difficult to determine whether this is due to the recommendations to identify municipal planning projects as part of the ICSP and the associated potential Gas Tax Funding or if it is a genuine issue for the region. A reading of the proposed planning initiatives suggests that while local governments may have been encouraged to address this topic in their ICSPs; after reviewing their town’s planning needs, it became obvious that additional planning support is required.

PROJECT CLUSTERS

Some sub-regional or geographic clusters of similar projects are highlighted above. These include, developing walking trails in the Humber Valley sub-Region, the National Park sub-Region, and the combined northern/southern Bay of Islands area; and Encouraging Volunteerism in the National Park sub-region and the Humber Valley sub-region. Another cluster of projects existed in Woody Point, Trout River and Glenburnie-Birchy Head-Shoal Brook where each community wants to conduct a Tourism Gap Analysis and create a Tourism Management Plan. It is worth noting that these three communities used the same consultant to prepare their ICSPs, therefore this may explain some of the similarities in their priority projects. For example, these communities also identified creating accessible buildings, a community composting program and food security project as important actions. Sub-regional clusters were also commonly identified in the collaborative plans which were prepared for the Deer Lake, Howley, Reidville and Cormack communities and also the North Shore Bay of Islands communities.

Additional projects that were not necessarily priorities for the entire region but did have pockets of interest within smaller sub-regional boundaries included:

Community Garden

Within the National Park sub-region, Norris Point and Glenburnie-Birchy Head-Shoal Brook both identified having a community garden as a project.

Recycling Depot

Within the National Park sub-region, both Woody Point and Trout River intend to create a recycling depot.

Fishery

Fishery related projects were varied though clustered throughout the Gros Morne Park Area in Glenburnie-Birchy Head-Shoal Brook, Woody Point, Trout River, Cow Head, and St. Paul's/Parsons Pond/Daniel's Harbour. These projects include "Secondary or Value Added Fish Processing" and "Promote a Hobby Fishery and construct a docking facility" in Woody Point, Trout River, and Glenburnie-Birchy Head-Shoal Brook, "Investigate community projects (to deliver economic benefits) related to the fishing industry" in Cow Head and "Develop linkages between community assets in tourism, the fishery, and regional cooperation" in St. Paul's/Parsons Pond/Daniel's Harbour.

Flood Risk Mapping

In the Humber Valley sub-region, Corner Brook, Steady Brook, and Cox's Cove all identified a flood risk mapping as a project

POTENTIAL PARTNERS

As part of the process of listing the project details, some communities also chose to identify potential partners that could help with the funding or information support of particular projects. Often, provincial government departments or other province wide organisations were identified.

- *The Department of Municipal Affairs*, as the administrators of the gas tax funding and the Municipal Capital Works Fund, was the most commonly identified government department with twenty-eight projects citing a need for their support and partnership. They were often identified in projects related to building and infrastructure that had already received government approval and support.

- *The Department of Environment and Conservation* was identified in fourteen projects. These projects were normally associated with conservation and environmental protection measures such as help with recycling programs, a “Bay water quality improvement project” in Jackson's Arm and “Protect water resources and environmentally sensitive areas” in Pasadena and “Updating Flood Risk Mapping” in Steady Brook. While it was not always clear whether the department was identified as a partner for financial or information support, there seemed to be a balance of requests for these two types of assistance.
- *The Department of Tourism, Culture, and Recreation* was identified as a potential partner in twelve projects. Unsurprisingly these projects were primarily centred around developing tourism promotion (such as the Tourism Gap Analysis in the National Park area) and infrastructure (for example Woody Point's “signage strategy”). However they were also identified as a partner in developing recreation programs for example “develop recreational amenities” in Reidville. In addition, more specific projects where they were highlighted as potential partners included “Encourage Agricultural Tourism (Agri-Tourism)” in Cormack and “Promote a Hobby Fishery and construct a docking facility” in Woody Point and Trout River.
- *The Department of Transportation and Works* was identified as a potential partner to “Preserve the surrounding landscape and trailways” in Woody Point and “Transportation linkages of waterways and trailways” in Trout River.
- *The Department of Industry, Trade and Rural Development* was involved in the most diverse range of projects. It is hard to determine any commonalities amongst the projects as they included such projects as “Develop Heritage Committee” in Reidville and Cormack, “Increase business diversity in the Community” in Cormack, and a number of projects in Cow Head including “Traditional skills workshops,” “Craft fairs and craft demonstrations,” “Invite oil industry representatives to a meeting with Council, local businesses, and residents,” “hold an economic opportunity identification workshop” and “Promote opportunities to residents and business owners.”
- The *Rural Secretariat* was identified as a potential partner by two communities. Glenburnie-Birchy Head-Shoal Brook saw a need for their assistance with the projects “Update the Municipal Plan for the Town of Glenburnie-Birchy Head-Shoal Brook” and “To develop a Land Management Plan.” And Pasadena saw a need for their assistance with “Encourage and support the voluntary sector” and “Promote and support youth voluntary initiatives.”
- *The Federal Department of Fisheries and Oceans* was identified in seven projects primarily related to developing aquaculture or supporting secondary or value added fish processing. Since most of the fisheries projects were centred in the National Park sub-region, so were the projects that identified DFO as a partner. One interesting project they were identified in was “Capture and Remove Rainbow Trout from Trout River to limit the potential threat of rainbow trout to native salmon” in Trout River.

Other potential partners at the provincial and federal level include the *Regional Economic Development Boards, Parks Canada, Recreation Newfoundland and Labrador, Newfoundland Craft Council, Heritage Foundation, and Conservation Corps.*

Executive Council Focus Points

In terms of the Corner Brook-Rocky Harbour Executive Council priorities of Health, Transportation and Communications Infrastructure and Education, the ICSPs were not focused in these areas. Projects addressing *education* seemed to centre around public education on environmental issues. The only community that commented on the desire for high-speed internet access and cell phone reception was Jackson's Arm, and this is particularly important since one of their other projects involves selling crafts online. *Health* was commented on only in the broadest sense of quality of life and active living goals. Deer Lake did note that there was “no quick access to Doctors and Pharmacy” and Jackson's Arm noted there were “few specialized services like x-rays” meaning they had to travel to Deer Lake and Corner Brook for these tests. Additionally, Norris Point wanted to “build on healthcare support services”. Other than projects related to road upgrading and creation, only two *transportation* projects were identified. These were by Deer Lake which will “Increase and Develop Transportation Services and Capacity” and Corner Brook which wants to undertake and implement the recommendations of a Traffic Impact Analysis

CONCLUSION

Upon review of the ICSPs for the Corner Brook-Rocky Harbour Region, it is clear that communities value their social and cultural assets – however the limited range of assets identified highlights the lack of asset based planned approaches used during the ICSP development. Communities identified many more issues and challenges than assets and, of these, engaging and involving community and having access to suitable planning were identified as challenges in almost every community.

For many municipalities, their key goals involve preserving and promoting their unique history; encouraging business development and tourism; protecting natural resources; having an open, accessible, and financially responsible municipal government; and maintaining or developing a high quality of life for residents. These goals are in line with the five pillars of sustainability meant to be addressed through the ICSP process and are often the precursors to the action-oriented projects also identified in the ICSP.

Key projects are driven by a need for infrastructure and planning but are also quite varied - indicating diverse needs across the region. As identified above, some projects are quite specific to a particular location while others highlight a regional concern, such as access to safe and effective water and sewer systems. Many projects, be they environmental, social, or cultural often relate to developing the community in a way that will make it attractive and provide services to potential tourists or new residents. This includes updating municipal buildings and recreation services, landscaping the area, and creating signs and maps. Regarding community governance, it is important to note that most governance projects focused on finding ways to open the lines of communication between residents and their councils, in order to keep people invested in community life in their particular municipality. This is also evident through the numerous projects that attempt to increase and encourage volunteering. There were significant numbers of issues, goals, and projects that point towards planning as a challenge, and it is clear that one of the most important findings to come out of this research is that communities in this region will require assistance and support with creating plans for the future—both large municipal plans as well as smaller community guidelines and budgets.

In general, most of the projects identified in the ICSPs were spread throughout the region, although some geographic project clusters seemed to develop, particularly in the National Park and Humber Valley region.

Not all communities identified partners for their projects but it is clear that those who did saw the Department of Municipal Affairs and the Municipal Capital Works Fund as key to developing their projects.

This research has provided an overview of regional commonalities within the ICSPs and has highlighted potential opportunities for community collaboration where there are clusters of projects. To strengthen and further develop the data and to identify additional collaboration opportunities, options include: carrying out a more detailed mapping of community assets and challenges and revisiting the ICSPs with individual communities to determine whether the plans accurately reflected their vision and actions for the future.

Appendix A List of Plan Type and Author

Hampden	Stand Alone	Atlantic Engineering Consultants Ltd.
Norris Point	Municipal Plan/ICSP	CBCL Ltd.
North Shore Bay of Islands (Hughes Brook, Irishtown, Meadows, Gillams, McIvers)	Collaborative Plan	Atlantic Engineering Consultants Ltd.
Lark Harbour	Stand Alone	Community Written
Pasadena	Stand Alone	Community Written
Cox's Cove	Stand Alone	Community Written
York Harbour	Stand Alone	Community Written
Humber Arm South	Stand Alone	Community Written
Deer Lake, Cormack, Reidville, Howley	Collaborative Plan	Community Written
Cow Head	Stand Alone	Keystone Sustainable Community Solutions
Corner Brook	Municipal Plan/ICSP	Stantec
Jackson's Arm	Stand Alone	Keystone Sustainable Community Solutions
Rocky Harbour	Stand Alone	Atlantic Engineering Consultants Ltd.
Trout River	Stand Alone	BAE Newplan Group/Tract Consulting
Woody Point	Stand Alone	BAE Newplan Group/Tract Consulting
Glenburnie-Birchy Head-Shoal Brook	Stand Alone	BAE Newplan Group/Tract Consulting
Steady Brook	Stand Alone	CBCL Ltd.
Mount Moriah	Stand Alone	Atlantic Engineering Consultants Ltd.
Massey Drive	Stand Alone	Anderson Engineering Consultants Ltd.

Appendix B List of Asset, Issue and Goal Categories

Assets

Asset: Cultural
Asset: Cultural – Arts Community
Asset: Cultural – Heritage Committee
Asset: Cultural – Heritage Structures
Asset: Cultural – Library
Asset: Cultural – Local craftspeople and traditional skills
Asset: Cultural – Museum
Asset: Economic
Asset: Economic – High Employment
Asset: Environmental
Asset: Environmentally Conscious Municipal Plan
Asset: Financially Sound
Asset: Food Resources
Asset: Governance
Asset: Green Spaces
Asset: Health
Asset: Health – Emergency Services
Asset: Port
Asset: Services and facilities
Asset: Sewer
Asset: Social
Asset: Social – Community Centre
Asset: Social – Community Pride
Asset: Social – Recreation Facilities
Asset: Social – Strong Social Network
Asset: Strong Partnerships
Asset: Tourist Industry
Asset: Transportation
Asset: Water
Asset: Social – Active Lifestyle

Issues

Issue: Infrastructure
Issue: Aging Population
Issue: Appropriate Labour Force
Issue: Communication
Issue: Training and Education
Issue: Community Engagement
Issue: Cultural
Issue: Cultural – Lack of Community Pride
Issue: Dependence on single industries
Issue: Economic
Issue: Economic – No Strong Economic Base
Issue: Environmental – Climate Change
Issue: Environment – Waste Management
Issue: Environmental
Issue: Environmental – Accessible Programs
Issue: Flood Risk
Issue: Food Price and Quality

Issue: Governance
Issue: Governance – communication
Issue: Governance – difficult to form council
Issue: Governance – High Taxes
Issue: Governance – Need administrative improvements
Issue: Governance – Need Planning
Issue: Health
Issue: Health – Few specialized services
Issue: Housing
Issue: Infrastructure
Issue: Lack of police
Issue: Lack of services
Issue: Land Use
Issue: Landscaping/Community Beautification
Issue: Limited Available Land
Issue: Need for Cultural Events
Issue: Need for Cultural Facilities
Issue: Need for recreation Infrastructure
Issue: Need to develop history
Issue: Outmigration/Decreasing Population
Issue: Sewer System
Issue: Sidewalks and Roadways
Issue: Social
Issue: Tourism Development
Issue: Training and Education
Issue: Transportation
Issue: Water System
Issue: Wildlife
Issues: Limited Available Land

Goal

Goal: Accessibility
Goal: Cultural
Goal: Cultural – Celebrate Diversity
Goal: Cultural – Promote Arts
Goal: Cultural – Promote Natural Assets
Goal: Cultural – Sense of Place
Goal: Cultural: Historic Preservation and Promotion
Goal: Cultural: Museum
Goal: Economic
Goal: Economic – Business Partnerships
Goal: Economic – Diversify Local Economy
Goal: Economic – Effectively Use Tax Revenues
Goal: Economic – Encourage Development
Goal: Economic – Maintain Debt Servicing Ratio
Goal: Economic – Maintain Support for Infrastructure and Services
Goal: Economic – Promote Area as Place to Live
Goal: Economic – Tourism
Goal: Economic – Work within financial resources
Goal: Economic – Diversify Local Economy
Goal: Economic – Effectively Use Tax Revenues

Goal: Environmental
 Goal: Environmental – Adapt to Climate Change
 Goal: Environmental – Avoid Natural Hazards
 Goal: Environmental – Energy Conservation
 Goal: Environmental – Landscaping/Community Beautification
 Goal: Environmental – Protect Natural Areas
 Goal: Environmental – Public Education
 Goal: Environmental – Sewage Treatment
 Goal: Environmental – Waste Management Control
 Goal: Environmental – Water Safety
 Goal: Environmental: Develop Recycling
 Goal: Environmentally Friendly Operations
 Goal: Governance – Citizen Input
 Goal: Governance – Effective Administration
 Goal: Governance – Future Plan
 Goal: Governance – Generate Interest in Running for Council
 Goal: Governance – Open and Accessible Government
 Goal: Governance – Record Keeping
 Goal: Governance – Work with Local Groups and Businesses
 Goal: Governance: Self Assessment
 Goal: Health
 Goal: Health – Active Lifestyle
 Goal: Health: Quality of Life
 Goal: Improve Access to Goods and Services
 Goal: Infrastructure
 Goal: Infrastructure – Physical Buildings and Equipment
 Goal: Infrastructure – Sewage Treatment
 Goal: Infrastructure – Sidewalks and Roadways
 Goal: Infrastructure – Water System
 Goal: Land Development
 Goal: Land Use
 Goal: Maintain Level of Community Service
 Goal: Recreation Infrastructure and Programming
 Goal: Reduce Greenhouse Gas Emissions
 Goal: Regional Cooperation
 Goal: Social
 Goal: Social – Address Seniors’ Needs
 Goal: Social – Engage All Members of Community
 Goal: Social – Foster Community Pride
 Goal: Social – Housing Needs
 Goal: Social – Work with Volunteer Groups
 Goal: Transportation
 Goal: Work within financial resources
 Goal: Work within physical resources
 Goal: Youth Recreation

Appendix C List of Projects by Category

Project	Community	Project Title	Other Tag
Project: Accessibility	Glenburnie-Birchy Head-Shoal Brook	“Accessible buildings for all ages and abilities.” (p 65)	Buildings and Equipment
	Woody Point	“Accessible buildings for all ages and abilities.” (p 76)	Buildings and Equipment
	Trout River	“Accessible buildings for all ages and abilities.” (p 80)	Buildings and Equipment
Project: Allow Pets	Trout River	“To permit and promote domestic animals.” (p 93)	
Project: Aquaculture	Woody Point	Aquaculture	Project: Research Development, Project: Support and Promote Local Business
	Trout River	Aquaculture	Project: Research Development, Project: Support and Promote Local Business
	Trout River	“Capture and Remove Rainbow Trout from Trout River to limit the potential threat of rainbow trout to native salmon.” (p 42)	
Project: Buildings and Equipment	Howley	“Upgrade Fire Hall, Town Hall, and Community Centre” (p 99)	
	Reidville	“Develop a Business Park” (p 82)	
	Reidville	“Farmers Market and Boat Launch” (p 81)	
	Cormack	“Complete Heritage Project” (p 60)	Project: Museum
	Cormack	“Complete and Fully Utilize Upgraded Community Hall and Heritage Centre” (p 60)	Goal: Cultural: Historic Preservation and Promotion
	Deer Lake	“Utilize Deer Lake through Development” “boat launch” (p 30)	
	Norris Point	“Buildings: New Town Hall” and “Neddies Harbour and Marina Proposal” (p 16) and “Juila Ann Walsh Cottage Hospital redevelopment” (p 18)	
	Glenurnie-Birchy Head-Shoal Brook	“Accessible buildings for all ages and abilities.” (p 65)	

	Humber Arm South	“Fire Hall Extension”	
	Humber Arm South	“Renovate Community Hall”	
	Cow Head	“Investigate additional cribbing” (p 55)	
	Cox's Cove	“Fire Engine Replacement” (p 21)	
	Woody Point	“Old Provincial Court Building Retrofit.” (p 94)	Project: Heritage Design Guidelines)
	Woody Point	“Heritage design” (p 87)	(Project: Heritage Design Guidelines)
	Woody Point	“Accessible buildings for all ages and abilities.” (p 76)	(Project: Accessibility)
	Woody Point	“Docking Facility / Boat Launch” (p 53)	
	Lark Harbour	“New Wharf and new wharf extension.” (p 13)	
	Lark Harbour	“Town Hall repairs and Town Hall Road repairs.” (p 12)	Project: Sidewalks and Roads)
	Hampden	“Upgrade playground.” (p 17)	(Project: Develop Recreation Programs/Facilities)
	Hampden	“Develop slipway at Bayside” and “Develop Bayside Marina” (p 15)	
	Pasadena	“Salt and sand shed.” (p 65)	
	Pasadena	“Develop a new community and recreation centre.” (p 60)	(Project: Develop Recreation Programs/Facilities)
	Pasadena	“Develop the old Rod and Gun Club property as a snowmobile staging area and floating-dock marina.” (p 58)	
	Trout River	“Ensure Heritage design guidelines” (p 90)	(Project: Heritage Design Guidelines)
	Trout River	“Accessible buildings for all ages and abilities.” (p 80)	(Project: Accessibility)
	Trout River	“Hockey Rink needs to be repaired for residents to use.”(p 73)	(Project: Develop Recreation Programs/Facilities)
	Jackson's Arm	“Rink Improvements” “Playground	

		up-grading” and “Slipway improvements.” (p 29)	
	Jackson's Arm	“Municipal building upgrade” (p 29)	
	Mount Moriah	“Construct salt storage shed” (p 16)	
	Mount Moriah	“Renovate/Expand Community Center/Town Hall” (p 14)	(Project: Develop Recreation Programs/Facilities)
	Massey Drive	“New Bus Shelters” and “Playground Expansion” and “New Town Hall” (p 18)	
	Massey Drive	“Streetlamps” and “Illuminated Crosswalk” (p 18)	
	Massey Drive	“New Pumper for Fire Department” (p 18)	
	Massey Drive	“Emergency Electrical Generator” (p 18)	(Project: Emergency Preparedness)
	Massey Drive	“Salt Storage Shed” (p 18)	
	North Shore Bay of Islands	“Continue developing Marina.” (p 28)	
	Steady Brook	“Develop plan for long term needs for municipal facilities for administration, operations, recreation, and emergency services with an eye to housing all in a centrally located Municipal Services Complex” and “Implement recommendations of the Plan.” (p 34)	(Municipal Plan/Planning)
